

- Stainless Steel heating cable assembly is fully terminated and moisture proof. Heater cable is simply installed inside the spike housing & melts snow & ice for safe operation even during freezing temps. 120VAC power source is required.
- Digital Thermostat controls the on/off of the heater cable system. Can be mounted inside a nearby building or may be mounted inside of a weather resistant box and post mounted near the drive way area.
- 15 watts per linear foot – enough to melt snow & ice - won't heat up spike plates enough to burn skin if top plates are touched
